The Healthy Food Policy Project identifies and elevates local laws that seek to promote access to healthy food while also contributing to strong local economies, an improved environment, and health equity, with a focus on socially disadvantaged and marginalized groups.

HFPP is a multiyear collaboration of the Center for Agriculture and Food Systems at Vermont Law School, the Public Health Law Center at Mitchell Hamline School of Law, and the Rudd Center for Food Policy and Obesity at the University of Connecticut. This project is funded by the USDA National Agricultural Library.

**HealthyFoodPolicyProject.org features:**

- A curated, searchable database of innovative local healthy food policies, analyzed by HFPP
- A crosswalk of local laws and policies, organized by food system category and type of law
- The policy coding tool used by HFPP in its analysis, so that others are able to understand the methodology
- Case studies that showcase healthy food policy initiatives around the country

Food is accessible when it is affordable and community members can readily grow or raise it, find it, obtain it, transport it, prepare it, and eat it.

---

This material is based upon work supported by the National Agricultural Library, Agricultural Research Service, U.S. Department of Agriculture.
The Healthy Food Policy Project (HFPP) identifies and elevates local laws that seek to promote access to healthy food, and also contribute to strong local economies, an improved environment, and health equity, with a focus on socially disadvantaged and marginalized groups.

These definitions are helpful when discussing healthy food policies:

HEALTHY FOOD
Food that is minimally processed; fresh, frozen, or canned produce that has little, if any, added sugar, salt, or fat; food that is culturally relevant; food that meets evidence-based nutrition standards; food that is both nutritious and safe to eat.

ACCESS
Food is accessible when it is affordable and community members can readily grow or raise it, find it, obtain it, transport it, prepare it, and eat it.

IMPROVED ENVIRONMENTAL CONDITIONS
Laws that promote or support: sustainable agricultural practices; soil resilience; pollinator health; clean air (e.g., reduces carbon emissions; particulate matter); clean water (including providing water testing); biodiversity (including green spaces like gardens and parks in urban areas); edible landscapes; soil testing for community gardens; human resilience to disease; pollinator-friendly landscapes/areas; address concerns about climate change; and aim to reduce waste (e.g., in terms of food and energy).

STRONG LOCAL ECONOMIES
Laws that encourage local dollars to stay in the community (e.g., buy local); provide financial support for establishing or strengthening local businesses/trade/producers (e.g., facilitate or create access to a funding streams—grants, loans; provides a tax break or other economic incentive); support livable wage jobs within the community; support humane working conditions for food workers; create pathways for economic prosperity (e.g. training programs; new/small business support); and promotes community wealth.

HEALTH EQUITY
The absence of disadvantage in chronic disease-related health outcomes regardless of one’s race or ethnicity, religion, socioeconomic status, gender, age, or mental health; cognitive, sensory, or physical disability; sexual orientation or gender identity; and/or geographic location.1,2

SOCIALLY DISADVANTAGED & MARGINALIZED GROUPS
Groups of people who systematically experience unfavorable social, economic, or political conditions based on their relative position in social hierarchies. Socially disadvantaged and marginalized groups often also experience a restricted ability to participate fully in society and enjoy the benefits of progress.3

HEALTH INEQUITIES
Disparities in public health that can be traced to unequal systemic, economic, and social conditions.1

HEALTH DISPARITIES
Health differences that adversely affect socially disadvantaged groups.3

TARGETED UNIVERSALISM
To improve outcomes for all impacted by a social issue, first address those impacted most.4 Pursuing health equity means striving for the highest possible standard of health for all people and giving special attention to the needs of those at greatest risk of poor health, based on social conditions.5
